Subject: Programming Assignment 2

Assignment Status: Incomplete

The assignment is not complete and is missing several components – but turning in something is better than nothing.

The program can successfully determine whether or not a number is prime. Furthermore, the majority of the time it can also generate a prime number based on a specified bit size. However, sometimes it does fail to produce a result or can take an undesirable amount of time.

The submission is missing programming section 3.2 (RSA Implementation) on.

I failed to give myself sufficient time to complete it - and was also confused by exactly how we are supposed to accomplish what is asked for in section 3.2.
